Well, in my opinion, I would recommend Joseph buy the TUXEDO Gemini 17 - Gen4 - AMD laptop. And I believe this is the BEST option considering what he wants to do because for one, it has an AMD Ryzen 9 9955HX CPU. With that type of power in a CPU, programming would not be an issue and gaming would run great on this. The second point I'd make is that it can be customized in on the website to which RAM amount he'd like. Since he is on a budget, I'd recommend getting 32 GB of DDR5 RAM, which is more than enough for gaming, and perfect for virtualization. The last thing is that, for 2TB of SSD storage, he'd have enough for any light video and photo editing. The price of the laptop would be 2,108 EUR, which currently comes out to \$2,471 USD, which is within his budget.

I would agree with you. I personally chose the Tuxedo Gemini 17 due to its customization and insane specs. However, I do like Jake's comment about not having to deal with compatibility issues. A lot of users get stuck or turned away from a product when it isn't compatible from what they're used to. The pricing is also not bad, at least compared to the Tuxedo Gemini 17 laptop.
